

I am seeking a Bachelor of Information and Communication Technology (Major in Cyber Security) degree combined with Diploma courses at Western Sydney University (WSU). I am passionate about the future career potential of Information technologies and aim to enhance my success. After considering various options, I chose WSU due to its top 2% global ranking, quality education, high employability retention rate, and student service quality. Its research-based young university attracts international students every year. Despite Nepal's potential for living and working, I found the country's education system insufficient and I spent 13 years of experience in Nepalese education. I ultimately chose Australia due to factors such as TPS, ESOS Act 2000, similar weather, multicultural classrooms, and a society with top-notch security that is free from oppression and discrimination.

I plan to return to Nepal to pursue their short and long-term goals due to the abundance of opportunities. I envision working as a cyber security engineer for large organizations like Verisk Nepal, Deer Walk, Gurzu Inc, and Elscript Technology. Nepal offers easy job entry, fast-track promotions, and social respect, making it an ideal workplace. Although I may receive a larger salary abroad, I will also gain access to other valuable things in Nepal.

I have a self-sufficient family committed to my education, with an AUD 317,639.46 ancestral property in Nepal and an annual return of AUD 25,958.45. The family also provides an AUD 56,708.63 student loan from Global IME Bank to cover tuition, living expenses, and other fees.

Ultimately, I intend to establish a consulting firm in Nepal since there will be less competition, low labor costs, and little need for investment. Additionally, I will be able to set up a team, network, and expertise in Nepal. I have to go back to Nepal to take care of my parents, who are single parents, and their possessions. If you interview me, further information may be discussed.
