I am interested in pursuing an International IT Pathway (X1D) degree and a Bachelor of Information and Communication Technology (P3T) with a major in cyber security. I have considered various options, including Australia and Nepal, but chose Australia due to its outdated curriculum, poor infrastructure, and methods of instruction. I believe that practical experience and a degree in cyber security can provide numerous opportunities. I also chose Australia over popular countries like the United States, Canada, and European nations due to linguistic difficulties, poor weather, and security concerns. The UTAS is ranked among the finest 273 universities in the world and 293 in the QS ranking. Tasmania boasts excellent professors, fantastic educational opportunities in a multilingual environment with 140 partner universities from around the globe for students, and a cost of living that appears to be cheaper than that of other Australian cities.

I chose an IT degree due to the motivation of Nepalese IT professionals, who earn more and have access to more resources. I believe outsourcing businesses are a legitimate way for Nepal to make money. Before starting my own business, I plan to work as a network security engineer at prominent Nepali companies like Deer Walks and F1 Soft. Nepal has a high number of security specialists, but inadequate network security mechanisms lead to high-security threads in programs, websites, and servers. Due to Nepal's shortage of top-level manpower, there are many opportunities for entry and rapid promotion. I commit to establishing my own business, working with international clients as a network security expert, helping my country, and recouping investment. I plan to maintain a high profit margin in Nepal with minimal investment and labor costs, citing stable income sources and solid property, and ensuring my family's support for academic and business endeavors.

I am a sincere student who is motivated and willing to study in Australia in order to achieve my career goal. I can be interviewed for further information.
